

AquaSpherePRO[®]

Biodegradable

-
-
- Easy to use! The natural alternative to chemicals.
 - Safe for all fish, pets, wildlife, people and plants.
 - Patented continuous 30 day release technology.
-
-

**Treats up to
1,800,000 Litres**

**Includes one biodegradable sphere.
Each biodegradable AquaSpherePRO
is designed for a 30 day treatment.**

Ideal for:

**Large ornamental fresh
water ponds, golf courses &
estate ponds, stock ponds
& swimming holes, parks
& recreational facilities**

Simplot WaterPack[®]

THE BIODEGRADABLE AquaSpherePRO® IS DESIGNED TO

prevent poor water clarity, odor and floating or suspended organic matter by consuming the excess nutrients in the water for improved water quality and clarity. The AquaSpherePRO contains a proprietary blend of naturally occurring bacteria and enzymes that reduce the organic debris that collects in water. There is no need to remove the sphere after 30 days because the outer shell of the AquaSpherePRO is made of a corn starch based product and will completely biodegrade within your pond over time.

WHAT TO EXPECT WITH THE BIODEGRADABLE AquaSpherePRO

Correcting water problems naturally occurs with time and continued use. This product is safe for fish, animals, wildlife, people and plants. Every body of water is different; therefore results may vary. Some ponds will respond more quickly than others due to their specific water conditions. The key to improved water quality is the monthly application of all-natural bacteria and enzymes that are included in the patented, time-released AquaSpherePRO. With continued use, you can expect improved water quality and clarity while eliminating odor.

CALCULATE NUMBER OF REQUIRED SPHERES NEEDED

Calculate the **Total Litres** in the pond or area to be treated.

(Length x Width x Average Depth x 1000 = Total Litres)

Do not undertreat water; overtreatment is safe for all fish and animals, and will yield optimal results. **If your pond is over 1,800,000 Litres use multiple spheres per 30 day period.**

Simplot PRODUCTS

For hard to treat ponds and lakes **BLAST** or **VISTA** can be used in conjunction with the AquaSpherePRO for optimum results. For additional information on pond treatment, contact your Simplot Partners representative.

Note: This is an all-natural system. It may require 4-6 weeks to achieve water quality improvement. For best results do not use chemicals in pond.

BIODEGRADABLE AquaSpherePRO DIRECTIONS

Use in self-contained ponds and retention areas.

1. Keep the AquaSpherePRO dry until pond application.
2. Remove outer plastic bag and gently toss all contents into the pond. **Do not open the sphere;** the inner bags are water soluble and will dissolve upon water contact.
3. **Deploy accurate number of sphere(s) every 30 days.**
4. Sphere placement: Evenly deploy spheres throughout the pond, if possible about 3 meters from shoreline.
5. The AquaSpherePRO works very well with all types of aeration. When possible avoid placing spheres directly by aerators.
6. The sphere will sink to the bottom of the pond after 30 seconds of being deployed and begin to work instantly.
7. Treat water temperatures of 7 °C - 43 °C.

Once the AquaSpherePRO is submersed into the water it is important to not let the sphere dry out during treatment. The entire shell and all inner contents will biodegrade in your pond over time. It is not necessary to remove the biodegradable sphere after the 30 days. **For season-long care, follow up with biodegradable AquaSpherePRO every 30 days while water temperatures are between 7 °C - 43 °C.**
