

Blast™

BLAST is designed to: reduce the organic debris that collects in water gardens and ponds. **BLAST** contains a proprietary blend of many different strains of natural occurring beneficial bacteria. **BLAST** is the perfect supplement for hard to treat stagnant pond water with high levels of floating and suspended organic compost and odor.

What to expect with BLAST: assistance in the health and clarity of non-responsive ponds.

BLAST DIRECTIONS FOR USE

Calculate Total Litres to be treated:

Length x Width x Depth x 1000 = Total Litres

Each bag of BLAST treats up to 450,000 Litres of water.

1. Calculate number of bags needed to treat pond:
Total Litres / 450,000 = Bags needed per treatment
2. Do not undertreat water; overtreating is safe and will yield optimal results.
3. Deploy water soluble bags of BLAST, distributing evenly throughout the surface of water area (near aeration when possible). Product will disperse as packets dissolve.
4. BLAST can be reapplied every 5-7 days for desired water clarity and health.
5. Dosage responses are variable.
6. Use proactively to reduce problems with clarity and stagnation.

WATER MAINTENANCE

Ponds do not take care of themselves. That is why we recommend that every pond owner develop a personal water management plan.

Monitor your pond weekly for organic compost and odor. This allows you to identify and respond to potential problems before they start.

BLAST for quick treatment of severely contaminated and stagnant water environments.

HEALTHY PONDS PRODUCTS

Achieve increased water clarity and improve water health naturally by using other Healthy Ponds products:

AquaSpherePRO Maintain your pond by using Healthy Ponds AquaSpherePRO, which is the easiest maintenance product on the market; it works 24 hours a day, seven days a week, for up to 30 days;

VISTA for rapid response consumption of excess nutrient.

For technical service contact your Simplot Partners representative.

Simplot WaterPack®

Contains 60 Water Soluble Bags.
