### PLANT GROWTH REGULATOR

## **DIRECTIONS FOR USE**

### **Restraints:**

DO NOT apply to turf recovering from wear, renovation or turf affected by disease, waterlogging or other stresses. DO NOT use where growth regulatory effects are likely following the application of a fungicide or any other material. DO NOT apply to turf going into or coming out of dormancy. DO NOT apply if rainfall is expected within 1 hour, and DO NOT irrigate for at least 1 hour after application. DO NOT apply to Kentucky Bluegrass as damage may occur.

recommended for quality turf.

**GENERAL INSTRUCTIONS** 

**Growth Regulation** 

Winter Grass (Poa annua) Management Different grasses vary in their sensitivity to AMIGO 120 ME. Since Poa annua is more sensitive to AMIGO 120 ME than Bent grass, AMIGO 120 ME can be used to reduce the competitiveness of Poa annua in Bent grass golf greens. AMIGO 120 ME can be integrated into existing Poa annua control programs. Low rates of AMIGO 120 ME (that provide growth suppression of Poa annua, but not Bent Grass) applied during peak growth periods may enable slow transition in the golf green sward composition away from Poa annua and towards a higher percentage of Bent grass.

match growing conditions, management practices and the amount of growth regulation required by the turf manager. Repeat applications can be made as soon as turf resumes growth or more suppression is required. Areas treated with AMIGO  $1\bar{2}0~\text{ME}$  should continue to receive regular maintenance practises, including irrigation, fertilisation, and weed, disease and insect control where necessary, as

regulation by AMIGO 120 ME begins about 3 to 5 days after application.

In practise, the amount of growth reduction achieved will vary between situations due to environmental conditions and management practices.

Therefore, to some extent application rates will need to be adjusted to

to 50% reduction in clippings over a 2 to 6 week period. Full growth

mowing management leading up to application is required to achieve a good quality turf surface and to obtain the best results from AMIGO 120 suppression. Apply the combination as soon as seedheads start to form or when it becomes a regular mowing intervention issue, normally during October to January. Apply at 4 week intervals after mowing The recommended use rates are designed to give approximately a 20 Couch Overseeding

Different grasses vary in their sensitivity to AMIGO 120 ME and resulting in control of seedheads as well as vegetative growth
